

Discover the Pathways

Wherever your patient is in their healing journey, we have the right solutions to treat chronic wounds, manage infection or improve skin resistance. Our goal is to achieve healthy and intact skin.

More information about the pathways:

Pathways to Healthy and Intact Skin

**B. Braun Wound
Management**

B | BRAUN
SHARING EXPERTISE

Start with Wound Bed Preparation

Biofilm is very likely present in non-healing chronic human wounds.¹ Appropriate wound bed preparation is an essential part of any chronic wound treatment.²

The **Prontosan®** range is designed to cleanse, debride, and help prevent biofilm formation.

Prontosan® Wound Irrigation Solution

Wound cleansing solution for acute and chronic wounds, including burns

Prontosan® Debridement Pad

Soft mechanical debridement of slough and debris

Prontosan® Wound Gel/ Gel X

Wound gel with cleansing and moistening effects

Manage Wound Infections

More than 50 % of chronic wounds are estimated to be infected.³ Wound infections can compromise the healing process and cause wounds to become chronic, with a significant negative impact on health-related quality of life.^{3,4}

Askina® Calgitrol® range offers a broad antimicrobial effectiveness.*

Askina® Calgitrol® Ag+

- Wound dressing combining antimicrobial ionic silver nanoparticles with strengthening cellulose fiber
- Manages wound infection and high exudate

Askina® Calgitrol® Paste

- Antimicrobial silver alginate wound dressing as a soft paste
- Allows close contact with wound bed in difficult-to-manage wounds

*Effective against most common specimens, including pathogens and gram-positive and gram-negative bacteria such as E. coli and MRSA.

Improve Skin Resistance

Clinicians can play a key role in the prevention and early detection of skin disorders. First-line protection of fragile and vulnerable skin against external influences is recommended before skin breakdown can occur.⁵

Maintain appropriate skin moisture and hydration with **Linovera®**.

Linovera®

- Oil with hyperoxygenated fatty acids (HOFA)
- Formulated to increase the skin resistance

Linovera® Emulsion

- Emulsion of hyperoxygenated fatty acids (HOFA)
- Contributes to better maintenance of skin at risk
